Arrow FusionSM Professional Services

ARROW FUSIONSM ONLINE CLOUD BACKUP

Arrow Fusion's Online Cloud Backup is a disk-based online backup and retrieval system for both Desktop and Server devices. With no capital investment required, Online Cloud Backup can be installed quickly and easily, offering immediate protection for all your data.

Applicable for companies in every market – from SMB, SME to Enterprise – Arrow Fusion's Online Cloud Backup is fully integrated with Arrow Fusion Data Protection Suite, and provides the first step in ensuring secure, fast and reliable data recovery.

FEATURES

- Secure data transmission and storage
- Flexible backup scheduling options
- Continuous management and reporting via web-based portal
- Scalable to thousands of devices
- Data is accessible any time, from anywhere

BENEFITS

- Protect your data in a secure environment
- Reduce the costs and risks of onsite disk or tape backup
- Assurance that data recovery is always available, significantly reducing business risk

Cloud-based Online Backup provides a simple way to ensure your files are always available – anytime and from anywhere.

HOW THE SERVICE WORKS

Arrow Fusion's Online Cloud Backup starts with the installation of an onsite agent for each of the identified production desktop devices and servers. An initial backup is performed capturing all existing data, and ongoing backup – scheduled or manual – captures only incremental changes, ensuring minimal impact on bandwidth.

Data is encrypted, compressed and transmitted securely to a top-tier Cloud Data Center, and is accessible from anywhere, at any time, through the web-based management portal.

ARROW FUSIONSM — Professional Services that help you grow YOUR ONE-TOUCH CLOUD SERVICES PARTNER

FULLY MANAGED

- Proactive, remote administration and monitoring 7x24x365 via web-based management portal with full visibility, management, alerting, reports and billing capabilities
